

OPTIONAL STEP DUAL SPRING CONFIGURATION

12

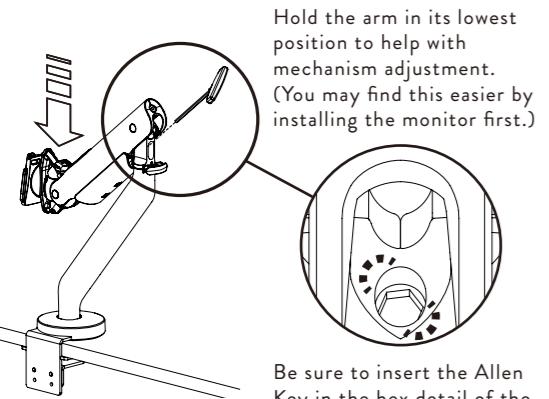

If the monitor to be mounted weighs less than 9kg (20lb) you may need to reconfigure the dual spring mechanism to the lower weight range.

An extra long T-Bar Allen Key is required to perform this adjustment - see guidance drawing below. This tool is not supplied with Flo X.

If you do not have a suitable tool, we can supply one. Please contact your account manager or dealer to request a tool.

TO RETURN TO FACTORY SET DUAL SPRING:

If Flo X Dual Spring mechanism has already been configured to low weight range, it can be returned to high load range by repeating the above process, except turning the adjuster screw clockwise until the mechanism reaches the end of its travel.

IMPORTANT
It is the responsibility of the installer to ensure all mounting screws are properly engaged with a minimum of 4 x 360° turns into the display. Under or over insertion may cause damage to the equipment or injury to personnel.

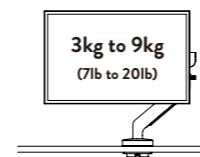

OPTIONAL STEP DUAL SPRING CONFIGURATION

4

If the monitor to be mounted weighs less than 9kg (20lb), you may need to configure the Flo X Dual Spring mechanism to suit the lower weight range.

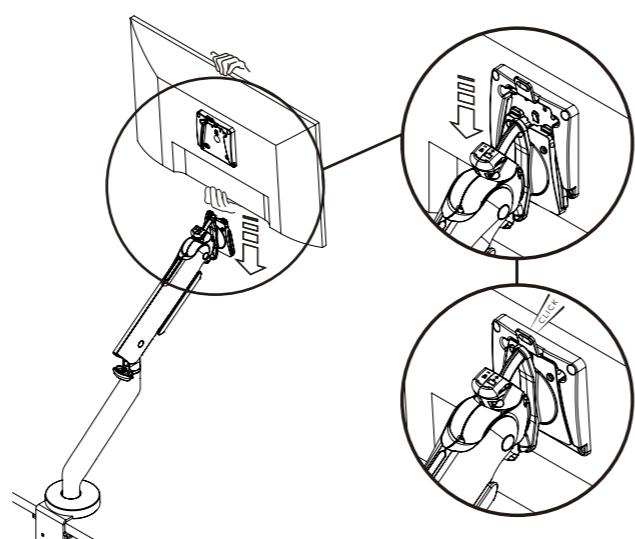

Factory set dual spring configuration is suitable.
Go to step 5

Dual spring mechanism will need to be reconfigured to lower weight range.
See step 12

MOUNT MONITOR TO ARM

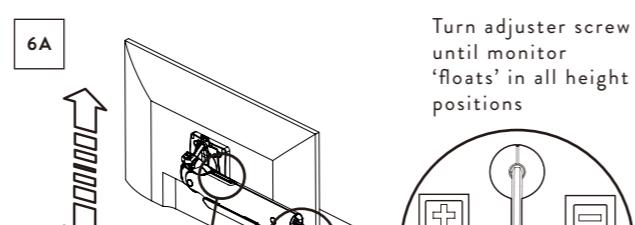

5

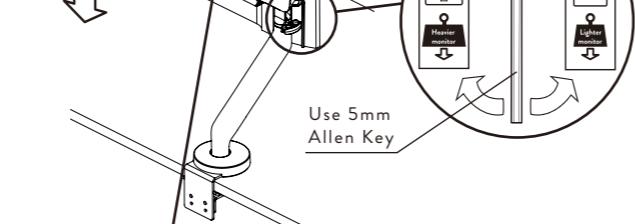

NOTE
See Optional Step 10 for Security Screw installation

ADJUST ARM TO SUIT WEIGHT OF MONITOR

6

Turn adjuster screw until monitor 'floats' in all height positions

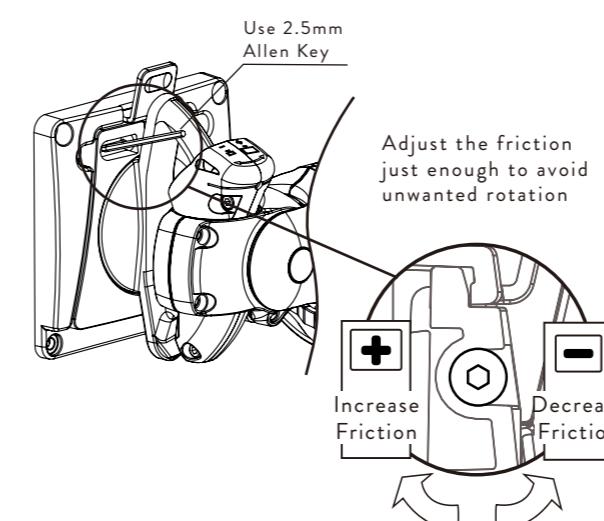

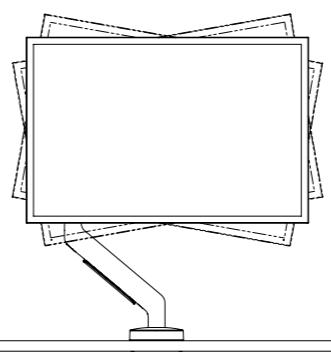

The arm setting indicator allows for quick installation of multiple arms

You can quickly 'dial in' to the same setting, then if necessary, fine tune the adjustment to balance the monitor

OPTIONAL STEP VESA FRICTION ADJUSTMENT (if required)

7

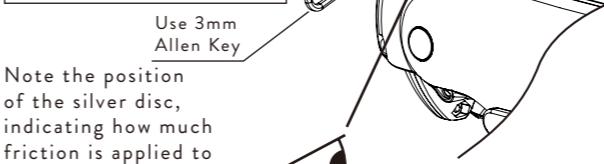

IMPORTANT
Portrait-to-landscape monitor rotation is factory-set for optimum performance, however if the monitor drops sideways, rotation friction can be adjusted as described below.

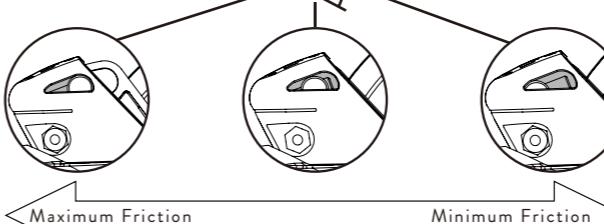

OPTIONAL STEP TILT HEAD FRICTION ADJUSTMENT (if required)

8

IMPORTANT
Monitor tilt should balance with factory settings. If monitor drops, adjust friction using adjuster screw beneath tilt joint

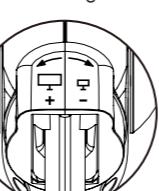

Note the position of the silver disc, indicating how much friction is applied to the monitor tilt.

Adjust the tilt friction just enough to avoid unwanted monitor drop.

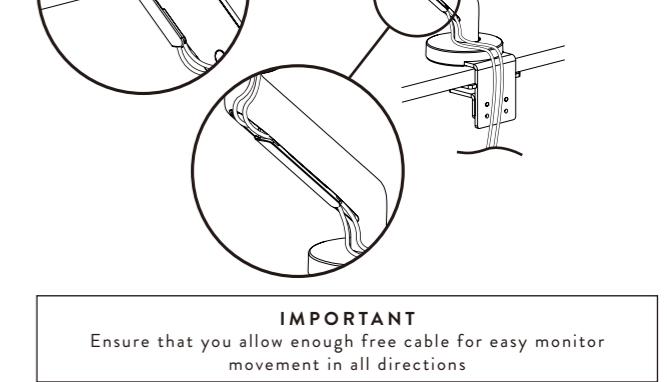

For heavy monitors turn the allen key to the left (in direction of the arrow).

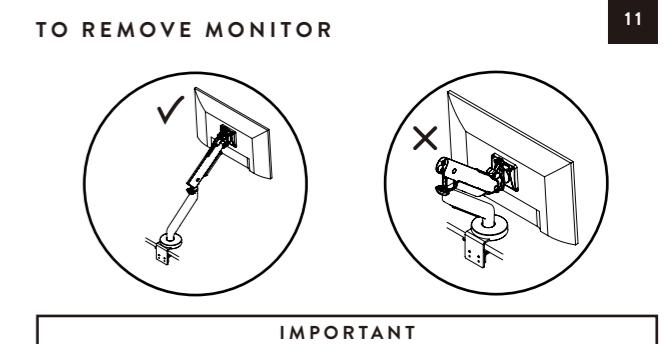

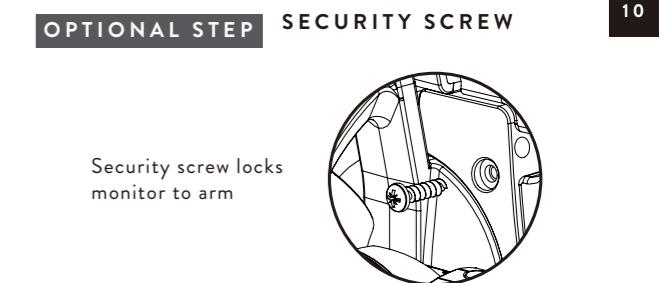

For lighter monitors turn the allen key to the right (in direction of the arrow).

9

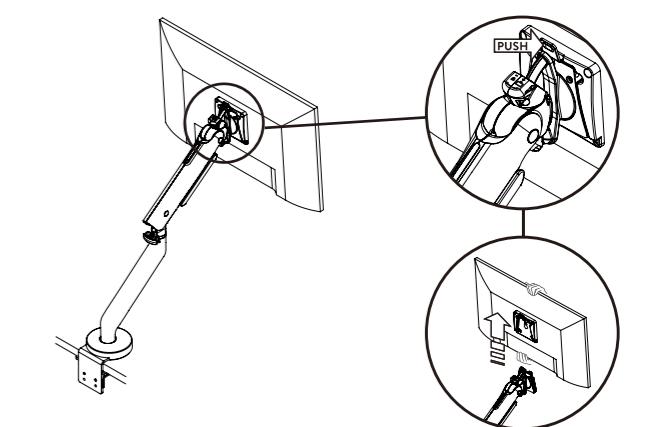

INSTALL CABLES

IMPORTANT
Ensure that you allow enough free cable for easy monitor movement in all directions

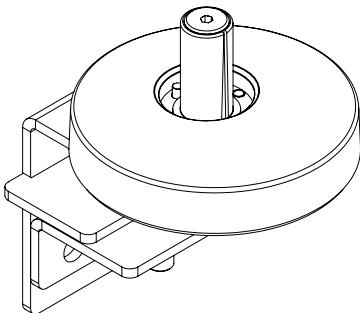

IMPORTANT
Raise arm to uppermost position before removing monitor otherwise it may spring up when unloaded.

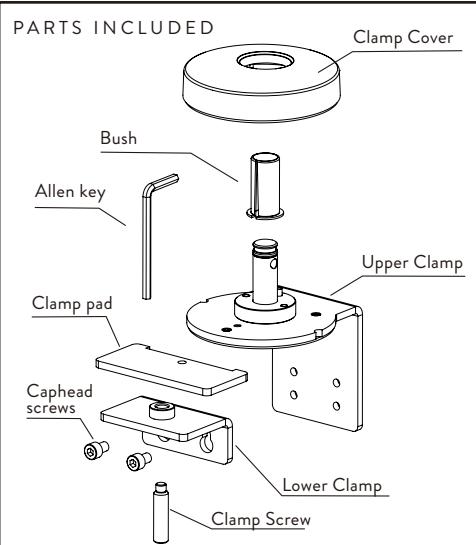

Note that drawing shows the top of the tilt head as viewed over the top of the monitor from the front of the desk.
